Re: Application – Senior Full Stack Developer

At Yoobux, I architected a scalable AWS backend using Node.js and Express, enabling real-time transaction processing for 500,000 monthly users. This aligns with commercetools' mission to build AI-driven commerce platforms that handle complex enterprise demands.

At Blackship Studio, I built REST APIs in Node.js for a SaaS product, reducing deployment time by 40% through automated testing. Separately, at Yoobux, I developed a React-based admin panel that centralized user management for 20+ client applications, improving operational efficiency. Both projects required full-stack coordination between frontend and backend teams, ensuring seamless integration of authentication systems via OAuth protocols. These experiences demonstrate my ability to deliver reliable, high-performance systems using modern tooling and architectures.

I am particularly drawn to commercetools' focus on composable commerce and innovation in enterprise solutions. I would welcome the opportunity to discuss how my technical expertise in building scalable full-stack systems can contribute to your team's goals.

Yours sincerely,

Smit Luvani
